Turnkey Solutions receives Supply & Demand Chain Executive's 2014 Green Supply Chain Award

Hong Kong, November 20, 2014 – Turnkey Solutions, a leading sustainability online platform proudly announces that it is a winner of the 2014 Green Supply Chain Award by *Supply & Demand Chain Executive*. Recipients of the Green Awards and their award-winning projects will be featured in the December issue of the magazine.

The 2014 Green Supply Chain Awards recognises Turnkey Solutions as a provider of leading edge supply chain solutions, innovation and services that supports their customers in achieving measurable sustainability goals as well as evaluating cost saving opportunities within their entire supply chain. This allows a client to improve environmental and social impact as well as refine their business process leading to cost reduction and optimisation. The award also recognises companies making sustainability a core part of their supply chain strategy, and who are working to achieve measurable sustainability goals within their own operations and supply chains, especially in the areas of Sourcing/Procurement, Fulfilment/Logistics, Operations and Product Lifecycle Management.

Turnkey Solutions was selected for the 2014 Green Supply Chain Award based on its work with the global NGO, Business for Social Responsibility (BSR) and listed seafood company and global market leader Pacific Andes.

Turnkey Solutions is supporting industry best practice with BSR through the development of a database collection and reporting tool for the container shipping industry under The Clean Cargo Working Group (CCWG). The CCWG members represent approximately 85% of the ocean container cargo. Using the Turnkey Solutions platform, environmental standards and metrics have become aligned through the system, allowing customers to benchmark performances and make better informed decisions. CCWG recently published results to indicate that its member carriers have reduced CO2 emission per container in 2013 by 7% year-on-year.

Turnkey Solutions also helps Pacific Andes improve their processes and corporate social responsibility practices by automating their sustainability data collection and reporting for the company's offices, factories and vessels globally. Since incorporating the Turnkey solution, Pacific Andes has for the first time been able to report on their carbon dioxide emissions at the Group level and created accurate metrics for their sustainability annual reports.

Tony Wines - CEO Turnkey Solutions – commented that “we are extremely flattered to be selected for the prestigious Green Supply Chain award from an entry of close to 200 applicants. The validation of our market leading solutions and commercial approach to this important business sector, will inspire us to continue to grow the breath of functionality of our software and increase the value we offer to our growing customer base”.

About Turnkey Solutions

Turnkey Solutions provide organisations and their network supply-chain partners with a unique and dynamic web-based platform that simply and affordably distils complex sustainability data. We enable organisations to understand, measure and manage their carbon footprint across the supply chain with robust visibility and powerful insights.
