

## **Hong Kong and Rotterdam - Press Release - August 1st 2016**

### ***Van Donge & De Roo collaborates with Turnkey Solutions to provide their customers with improved carbon footprint information.***

Turnkey Solutions is pleased to announce their latest customer Van Donge & De Roo, a leading global transportation and logistics company based in Rotterdam, Netherlands. As customers become more environmentally aware, the ability to review the carbon impact from transportation of their products becomes increasingly valuable. By adopting the Turnkey sustainability platform, Van Donge & De Roo will be able to provide their customers and partners with an overview of carbon impact from their logistics services.

**Dennis De Roo – Managing Director at Van Donge & De Roo:** “One of our goals is to promote energy efficiency and Co2 reductions across the industries in which we work. We have focused our efforts on where we can achieve the greatest impact, namely within our shipping activities which are responsible for more than 70% of our Group’s Co2 Emissions.

While our size within the Port of Rotterdam comes with a significant footprint, it is through our network/terminal optimization and via intermodal transportation that we in shipping can contribute to sustainable solutions.”

### **D&R’s Group commitment to reduce Co2**

D&R’s reduction target is 60% less Co2 emitted per container moved by 2025 (from 2015 as basis) combined with growth in volume transported. This initiative supports D&R’s efforts at choosing the right partners and detaching growth from consumption.

D&R see Turnkey as an ideal partner to provide a monitor on the Group’s progress in reduction for Co2 emissions and this will be reported pro-actively on among others, the website of the different companies active within the Group.”

**Ian Catley, Business Development Director at Turnkey:** “We are delighted that Van Donge & De Roo is joining the increasing number of companies who look to Turnkey to support and validate their sustainability goals. With our deep experience of the logistics market, Turnkey is ideally placed to support transportation companies in their efforts to switch to more Co2 efficient transport methods and in selecting the right partners to collaborate with.”

### ***About Van Donge & De Roo***

Van Donge & De Roo is a leading supplier of forwarding and logistics services and one of Rotterdam's largest privately owned freight forwarding organizations. Key to their success is a sophisticated IT solutions which provide customers and suppliers with business critical information 24 hours a day, 7 days a week, 365 days per year through online accessibility via their system and electronic-data-exchange (EDI) services.
